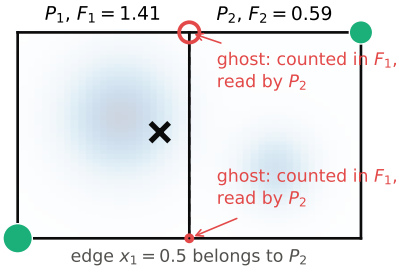
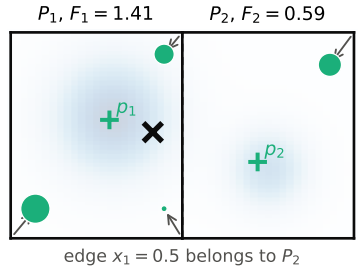
(a) vertex LP optimum, value $\overline{h} = 0.7444$



(b) slide toward p_i ($\varepsilon = 0.25$): value 0.7260



CoP unchanged: $|c_\varepsilon - c| = 6e - 17$; $\quad |\Delta| = 0.0184 \le \varepsilon |b| \mu \sum_i F_i \operatorname{diam} P_i = 0.1381$
