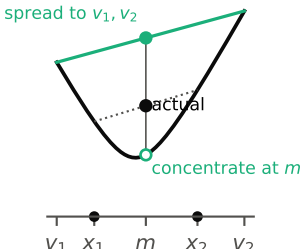
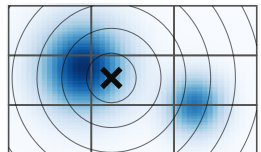
(a) convex g on a taxel

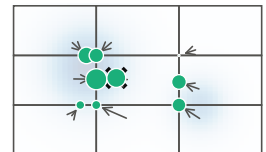


(b) $\nu^\star$ and level sets of g



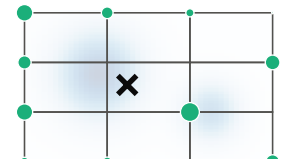
true $h = 0.226$ (rotation about the CoP)

(c) lower bound: concentrate



$\underline{h} = 0.127$, one point per taxel

(d) upper bound: spread to corners



$\overline{h} = 0.441$, 11 nonzero weights $\leq r + 2 = 11$
